ADusers™

Point and Click Bulk User Management for Active Directory®

ZOSTEROPS
Enterprise Operating System & Network Solutions

Are you constantly making modifications to user objects? Once you've accomplished tasks, are more tasks lurking behind it? ADtoolkit Element ADusers™ allows you to make changes to Active Directory user data in bulk, eliminating the repetitive nature of modifying user objects without our tools. In addition, the ADusers interface promotes efficient management by allowing you to save frequently used configuration settings into work-spaces. Then, by clicking on your desktop workspace shortcut, your saved configurations are accessed so that you can quickly make changes, or import a new list of users to add or modify.

Don't mistype your attribute names again! ADusers allows you to point and click to specify which user attributes you'd like to change. Forget about looking up attribute names, or writing scripts that get outdated the next time you need them. With ADusers, you'll just point and click to make changes to multiple users at once.

ADusers is a solution for administrators tasked with adding or changing information on user objects on a regular basis. No extensive product roll-out or lengthy installation procedure because ADusers is a client only application, which needs no back-end database.

ADusers can be used in conjunction with ADreporter, and other ADtoolkit Elements. Reports run in ADreporter can be imported into ADusers to modify only those users found in the report.

ADtoolkit Elements are available starting at only £295 per administrator. Get yours today!

Change user attribute data with a click.

Check out the versatility of ADusers:

- **Add and Modify Users:**
  - Set Terminal Services settings
  - Set Dial in settings
  - Set Password criteria (advanced)
  - Set Address attributes
  - Set account location
  - Set Home folder, profile location and logon scripts
  - Add users to groups
  - Modify group memberships
  - Designate Name formats
  - Provide Logon information
  - Set Mail Attributes
  - And many more user attributes

- **Delete Users:**
  - Delete or disable user accounts
  - Remove Mailboxes
  - Remove home directories and files
  - Remove Users from groups
  - Remove profile directory
  - Remove Users from Home Directory ACLs

- **Move Users**
